

Product Specification v1.0

1. Executive Summary

Defines the enterprise product model for the clothing e-commerce platform. This specification is the single source of truth for product lifecycle, catalogue behaviour, pricing, inventory relationships and API integration.

2. Business Objectives

Provide a scalable catalogue supporting variants, SEO, promotions, inventory, omnichannel fulfilment and future marketplace expansion.

3. Stakeholders

Product Owner, Merchandising, Marketing, Customer Support, Warehouse, Finance, Frontend, Backend, QA and DevOps.

4. Product Lifecycle

Draft → Review → Scheduled → Published → Archived. Only Published products are visible to customers.

5. Functional Requirements

Create, edit, duplicate, archive, restore, publish, schedule publication, manage variants, media, SEO, pricing, inventory and categories.

6. Product Attributes

UUID, SKU, Name, Slug, Brand, Categories, Description, Gender, Season, Material, Status, Visibility, Created/Updated timestamps.

7. Validation Rules

SKU unique; slug unique; mandatory primary image; published products require price, inventory and category.

8. Security

Role-based access; audit every create/update/delete/publish action.

9. API Mapping

GET /products, POST /products, PUT /products/{id}, DELETE /products/{id}, POST /products/{id}/publish.

10. Acceptance Criteria

Products satisfy validation, publish successfully, appear in search and category pages, and emit audit events.
